

Honorary Commissioners,

I strongly OPPOSE Docket # 01-278 and ask part 15 be upheld without modification. please consider to deny access on the 425-435Mhz band segments pertaining to use of unlicensed devices, RFID and others with radiation levels of 11,000uV/m operating in a band that is currently under heavy utilization by amateur and other services. Signal level and transmission duration of such devices states by technical study data to be unkeeping with part 15 rules and the communications act of 1934. What SAVI has requested may cause significant interference levels on the 425-435Mhz band. This proposal presents a significant possibility to displace services vital to emergency and disaster preparedness organizations, possibly with far reaching consequences. Thank you for your time.

Sincerely,  
Rick Eastwood
